The screenshot displays the Scilab 2026.1.0 interface. On the left, the 'File Browser' window shows the directory structure of the user's documents, including 'My Music', 'My Pictures', 'My Videos', and a file named 'ex 6.sci'. The main window is the 'Scilab 2026.1.0 Console', which shows the execution of a script. The script contains several lines of code, including a syntax error message: 'Error: 2.9->2.10 syntax error, unexpected &'. The script then executes a series of commands to calculate the Cartesian, Cylindrical, and Spherical coordinate systems for a given point (X=13, Y=-2, Z=8). The output of the script is displayed in the console window.
